

STRAPPING / WRAPPING SYSTEMS
MODEL: TWINPACK

The most economical introduction to complete transport load protection

What is a TwinPack?

The TwinPack is a combination of approved Cyklop machines. The GL 215 stretch wrapper and the XP 112-MVB strapping machine have been combined in the TwinPack. The TwinPack is centrally controlled which ensures optimal operation. Equipped with the high tension sealer head CFH 1 guarantees a perfect strapping result.

This combination of the two techniques makes the TwinPack indispensable in daily despatching departments. The TwinPack allows a pre-selection of many different packing combinations.

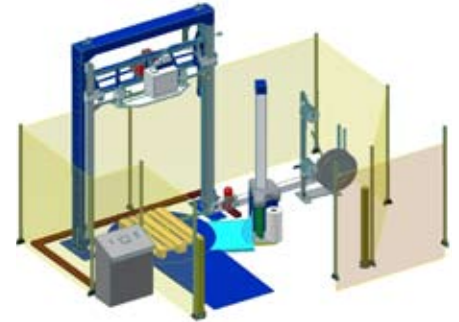

The stretch wrapper has the following stretching programmes:

1. Economical wrapping
2. Normal wrapping
3. Rainproof

The strapping machine has the following strapping programmes:

1. 2 x cross strapping
2. 2 x lengthwise strapping
3. 4 x (2 x cross strapping / 2 x lengthwise strapping)

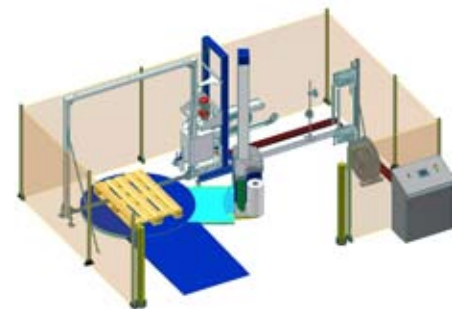

These stretch and strapping programmes are, of course, combined with one another.

TwinPack 111

Advantages at a glance:

- **Two in one**
Two types of transport protection combined in one machine
- **Flexibility with TwinPack**
Demands on packing are continuously increasing. The TwinPack makes it possible for Cyklop to fulfil these demands.
- **Strapping or Stretching**
The customer determines the type of load protection by using the appropriate programme pre-selection (product related).
- **Strapping made easy**
The irritating manual strapping and sealing disappear. The pallet is placed on the turntable, the strapping cycle is started per push button. The machine automatically straps the load according to the pre-selection.
- **Timesaving**
Valuable time is saved due to automation in this area. The operator only moves the pallet once. The number of secured pallets per hour rises considerably.
- **Cost Optimisation**
Lowering costs by using the optimal transport load protection or packaging.
